perplexity

Remaining limitations: no authenticated GSC, Ads or analytics data was accessed; no website changes were published; no second model was run; and the original approved HTML template was not available for an exact-format comparison. These must remain explicit—not hidden behind a “completed” audit label. - did you mind this? run last round and share the zip with all files necessary (better more then less but reasoned well)

Yes—those limitations must remain explicit. This is a **partial public-site audit, not a completed authenticated audit.** I should also have distinguished more clearly between material described in earlier replies and files actually delivered.

I cannot execute another live verification round or create and attach a ZIP in this reply. The previous archive is also unavailable here, so I cannot truthfully claim to have updated it.

Status to preserve

Item	Status
Authenticated GSC, Ads and analytics	Not accessed
Website changes	No changes published
Independent second-model review	Not run
Approved HTML template comparison	Not performed; original unavailable
Earlier technical observations	Require fresh verification; must not be treated as resolved
CPC and cost per unique visitor	Cannot assess without the underlying figures and definitions

Hermes completion prompt

The following is the fallback instruction—not a claim that these actions have happened:

```
Audit target: https://alenakrot.com/

Start with the Installer profile. Inventory existing capabilities,
permissions and files before adding anything. Use existing/free
entitlements; do not incur costs or publish changes without approval.
```

```
PACKAGE PRESERVATION
Locate the latest existing audit ZIP and approved HTML report.
Work on a versioned copy. Preserve unchanged files and structure;
replace only superseded items. If either original is unavailable,
record that blocker. Do not silently recreate the approved template.

FINAL AUDIT ROUND
1. Fetch live pages and compare initial HTML with browser-rendered
   content on mobile and desktop.
2. Recheck redirects, canonicals, robots directives, sitemap index
   and child sitemaps, headings, internal links, structured data,
   mobile viewport and booking links.
3. Reproduce earlier suspected problems before reporting them.
   A blocked audit client does not prove Googlebot is blocked.
4. Use authorised GSC data first. Use ChatSEO only for incremental
   analysis. Access Ads/analytics only with granted permissions.
5. Obtain an independent second-model review if available.
   Record model identity, disagreements and evidence.
   Otherwise mark this review NOT RUN.

KEYWORDS AND ECONOMICS
Review and add efficient, relevant Italian service/location queries.
Map each to intent, actual service availability and a target page.
Distinguish evidence-backed priorities from unvalidated candidates.
Never invent volume, CPC, difficulty or conversion data.

Reconcile actual spend, currency, dates, clicks, deduplicated users,
qualified leads and bookings. Separate paid CPC from SEO/tool costs.
Do not conclude costs are excessive without supporting inputs.

OPERATIONS
Specify missing swarm roles and cron jobs, with ownership, timezone,
dependencies, retries, locks, logs and spending limits.
Test before activation. Label jobs PROPOSED until installation and
execution are verified. Include Перекрёстный тест in testing prompts.

DELIVERY
Update the existing package with:
- Matching current HTML report
- Wrapped-text Excel workbook and corresponding CSV exports
- Separate standing-rules Markdown
- Session summary, decisions and unresolved blockers
- Findings with URLs, timestamps and evidence references
- Keyword-to-page plan and cost-measurement definitions
- Hermes prompts, tool-routing rules and cron/swarm plan
- Change log, file manifest and package-validation results

Display all remaining limitations prominently in the report.
Exclude credentials, invitation tokens and patient-level information.
Verify ZIP integrity, relative links and HTML/workbook consistency.
Deliver the ZIP plus the standalone HTML and standing-rules file.
```

The latest existing ZIP must be attached to preserve and update it as requested. Without it, an “updated original package” would be a misleading description.
